IMPORTANT!

- NEVER place your hands or fingers in front of the nozzle
- NEVER point the gun at yourself or anyone else
- Discharge the pressure in the gun and use the appropriate safety precautions when the operator is not working
- DO NOT cut or tamper with the safety mechanisms on the device.

Gun Filter: for coarsely pigmented or high viscosity materials, we recommend the use of a nozzle of min. 0.018" diameter and a 50 Mesh filter. For fine, thin-flowing materials, use a filter of 200 Mesh.

Filters can be best cleaned with a brush dipped in solvent. Never poke it with a sharp instrument.

Filter cleaning: Unscrew the handle from the gun housing (if necessary, use gun spanner and pull out the filter completely). Insert the new filter as indicated in the drawing.
